

\*Color may vary from the images shown

Our No.1700 Track System hardware is built for the most demanding applications, offering superior strength and industrial-grade performance for large-scale fire door style installations, without the included door. Designed for architects, builders, and fabricators working on high-load commercial, warehouse, or specialty industrial projects, this system allows for seamless integration with custom, reclaimed, or site-specific doors.

Each hardware kit includes a heavy-duty 2-1/2" steel track, No.1700 cast iron hangers equipped with dual-bearing wheels for reliable, smooth movement under substantial weight, and a reinforced counterweight chain-and-pulley system for balanced operation. The system also includes essential components such as end stops, track brackets, and bottom guides, excluding mounting bolts and the door panel. Engineered for strength, the No.1700 hardware accommodates doors 2" to 3-1/2" thick and weighing up to 2,500 lbs., making it the ideal choice for projects that demand maximum stability, safety, and authenticity.

## No. 800 Metal Door System

Our No.1700 Fire Door Style Hardware Systems are engineered for heavy-duty applications where maximum strength and durability are required. Due to the robust nature of this system, we recommend using a professional garage door installation company to ensure proper and safe installation. Each system is manufactured to fit the exact listed opening dimensions, so installers won't need to modify or cut components to length.

Optional parts and accessories that are compatible with the No.1700 Track Systems are available for separate purchase.

### Parts and Assemblies

No.1700 Series Allith sliding door track system, available in the corresponding sizes listed  
Mounting hardware kits based on wall thickness and are sold separately
