

\*Color may vary from the images shown

Our Tin-Clad Fire Door Style Hardware packages offer the historic appeal of early industrial sliding door systems without the included door, giving designers and fabricators the flexibility to integrate the hardware with a door of their own choosing. Ideal for projects where a custom, reclaimed, or site-specific door is preferred, these kits maintain the authentic mechanical detailing of vintage tin-clad fire door systems.

Each hardware set includes an Allith Manufacturing Co. 1-1/2" round track, No.3 cast iron hangers, a calibrated counterweight chain-and-pulley system, and all essential components for a smooth, balanced glide, excluding mounting bolts and the door itself. Designed to support doors 1-3/4" to 2-1/2" thick and up to 1,000 lbs., this category provides adaptable, commercial-grade performance with historical integrity.

## No. 700 Fire Door Style Hardware

Our No.700 Fire Door Style Systems are engineered with precision and may require advanced installation techniques. For best results, we recommend hiring a professional garage door installation company. Each system is designed to fit the exact listed opening dimensions, so there's no need for the installer to cut components to length. Optional parts and accessories that are compatible with the No.700 Track Systems are available for separate purchase.

### Parts and Assemblies
