

*Color may vary from the images shown

Our No.800 Track System hardware captures the refined engineering and robust functionality of traditional fire door assemblies, without the door, offering architects, fabricators, and designers the freedom to pair it with a custom-built or site-specific door of their choosing. Ideal for restoration projects, high-spec commercial spaces, or residential builds looking to evoke early 20th-century industrial design, this hardware set delivers both performance and presence.

Each kit includes a precision-formed 2" steel track, No.800 cast iron hangers with dual-bearing wheels for stable and fluid movement, and a heavy-duty counterweight chain-and-pulley system for controlled operation. Additional components such as end stops, track brackets, and bottom guides are included, while mounting bolts and the door panel are excluded. Built for strength and durability, the No.800 system supports doors 1-3/4" to 3" thick and up to 1,500 lbs., delivering authentic mechanical character with modern reliability.

No. 800 Metal Door System

Our No.800 Fire Door Style Hardware Systems are engineered with strength and precision, and may require advanced installation techniques. For best results, we recommend hiring a professional garage door installation company.

Each system is designed to fit the exact listed opening dimensions, eliminating the need for installers to cut components to length on site.

Optional parts and accessories that are compatible with the No.800 Track Systems are available for separate purchase.
